

WEXXAR DEVELOPS CUSTOMIZED WF20T CASE ERECTOR FOR MEAT PACKAGING PLANT

Several highly customized WF20T Fully Automatic Case Erectors from Wexxar were recently developed for a meat packaging plant in Ontario Canada. The client has been a long-time user of Wexxar and when they had plans to open a new factory, they once again went to Wexxar for our reliable packaging machinery and easiness to work with. Although some of these options have been implemented on previous projects individually, they have never been integrated all on the same machine until now. Options on these machines included:

- Undersize Height
- Enviroguard
- Ontario Pre-Start Health and Safety Regulation Modifications
- Grace Volt Vision
- Grace Volt Check
- Category 3 Electrics
- External Power and Ethernet Outlet
- Custom Machine Monitoring System

and many more...

Wexxar's philosophy to approach every opportunity as a chance to provide a packaging solution for the client, adapting to the customer's application and tailoring our products to fit your needs has always led to success and this project was no different. If you have a unique project on hand, please feel free to bring it our sales staff and they will be happy to provide consultation on what we or even competitors can provide for you.

Grace Volt Vision and Check

External Power and Ethernet Outlet
