

## WEXXAR DEVELOPS WF30 CASE ERECTOR TO ERECT BOTH A CSSC AND A REVERSE GAP FLAP CASE

Companies with complex and challenging applications often turn to Wexxar for help because clients know that Wexxar approaches each project with the goal to provide the best service and solution for the customer. Wexxar's solution approach philosophy allows us to deliver the best performance and product time and time again.

We were challenged again last year when a co-packer approached us with a project to form both a CSSC case and a Reverse Gap Flap RSC on the same machine. Handling one application is challenging in itself, but designing a single machine to handle both types of non-standard cases was very difficult. However, after some discussions with the customer and hard work by our engineering team, we were able to build a WF30 Hot Melt Case Erector which can reliably and consistently form both a reverse gap flap and a CSSC case with just a quick and simple 10 minute change over.

We welcome all types of projects from simple to complex applications, Wexxar will provide you with a solution that works. To take a look at the result of our hard work on this project, please [click here](#).
