

## PRODUCT SPOTLIGHT – DEKKA 100 CASE SEALER

At last year's Pack Expo Las Vegas 2013, Dekka announced its all new machinery line with the introduction of the DEKKA100 Bottom Belt Tape Case Sealer. We recognized an opportunity in the low-cost case sealer market as many of the existing product offerings in the market were designed and built to a low level of quality. The DEKKA 100 brings Dekka's superior design and manufacturing standards to the entry-level case sealer market.

"The development of the DEKKA 100 is a milestone for us," said Sander Smith, Dekka Product Manager. "Fans of the renowned Dekka tape head have been asking for a case sealer based on its reliable tape head design. We expect this to be the first in a series of compact machines for businesses with limited floor space and a need to improve productivity on their overburdened hand pack lines. This is just another step in our goal of being the leader in all areas of tape sealing."

The DEKKA 100 is able to handle a wide range of case sizes and can easily be changed to adapt different cases with a quick 2 point size change over. This machine differentiates itself due to its compact design, high quality North American build, quick and easy access points for maintenance, helpful pictorial guides and color coded size change labels.

We expect this machine to be popular for smaller start-ups or businesses with constrained floor space. The DEKKA 100 is also an easy purchase for long-time users of the Dekka tape head as the machine is designed to be the perfect pairing for the Dekka tape head.

*Bottom belt uni-drive system, allowing for a consistent seal over long term use*

*Quick size change with top wheel and tilting guide rails*

*Utilizes industry leading Dekka Cadet tape head with an open design, making it easy to refill tape*
