

PRODUCT FEATURE SPOTLIGHT – WF20 CASE FORMER

The WF20 is WexxarBel's bestselling automatic case erector and one of the most popular machines in the market. Reliability, consistency and repeatability are what make this machine a popular choice for businesses looking for a box making solution. Also, due to the WF20's flexibility and customizability, it is a great fit for low to mid speed applications with single or multiple case sizes. Many customers looking to upgrade their packaging line with a fully automatic case forming solution often choose the WF20 as its ability to go up to 20 cases per minute is the perfect speed for mid speed applications but also gives lower speed packaging lines room for growth.

The high level of success for the WF20 can be attributed to the high level of engineering skill and effort put into every detail of the machine. From when the case blank is first loaded to when the formed box exits the machine, each process is optimized for effectiveness and efficiency. The machine is also centralized around the Wexxar's patented "Pin and Dome"¹ technology which allows the machine to be in full control of the case during the entire forming process, allowing for a square forming consistently and repeatedly even over many years of usage. Another feature of the machine includes upright forming of the case throughout the machine so that cases handling and fondling is minimized to reduce

the chance of damage to the case. Other standard features of the WF20 include active flap folding with rotary folders to improve case forming, tool-less, color-coded and pictorial guided instructions for easy operation and size changeovers, tilt-out tape head for quick tape roll changes, and color HMI for simple machine control and troubleshooting.

Similar to WexxarBel's other products, the WF20 is developed with a customer focused design, consistent and reliable performance, and premium construction and build quality. With Wexxar Packaging's 40 years of engineering support and customer focused approach, we work with you to deliver the best packaging solution possible. The WF20 has been able to handle an assortment of applications including RSC's, HSC's, FOL cases, Display cases, and a variety of different cartons, boxes or cases.
